Sponsor Prospecting Report : Detection Engineering Weekly

Prepared: July 21, 2026. Research window: April-July 2026, core coverage June 20 - July 20, 2026. All claims in this report link to a public, dated source. No contact has been made with any brand on your behalf.

Executive summary

Your newsletter reaches roughly 15,000 detection engineers, SOC analysts, and threat intel practitioners every week, across 163 issues, and currently carries zero sponsorships. Meanwhile, the newsletters and podcasts your audience also reads sold out their sponsor slots: CloudSecList (12k subscribers) charges \$1,950 per placement and reports 2025 fully booked, with reservations already extending into late 2026 (<https://cloudseclist.com/sponsor>).

This report identifies **30 brands currently paying for sponsorships in front of audiences comparable to yours**, each with dated, linked evidence of their spend, the person most likely to own that budget, and a ready-to-send pitch. Ten of them (tier 1) bought multiple placements across several security newsletters in the last six weeks alone.

Method credibility check: two of the newsletters we scanned publish their past sponsor lists. Cross-referencing our extraction against Vulnerable U's declared sponsors, we independently re-found 11 of 12 as currently active buyers elsewhere (92%). The method finds live budgets, not stale logos.

The math: at the recommended \$2,000-2,500 primary placement rate, **one closed sponsor from this list covers the cost of this report several times over**. Four booked slots a month at the low end represent roughly \$8,000/month of currently unmonetized inventory.

Recommended first three calls: **Tines** (7+ placements across 4 newsletters in 5 weeks, including your closest peers), **Sublime Security** (bought a full week of Risky Business inventory in early July), **Nebulock** (paid for a wholly sponsored Risky Business Soap Box episode about threat hunting, the exact center of your audience).

How this report was built

- We scanned the public archives of 14+ security newsletters and podcasts your audience overlaps with: tl;dr sec, Vulnerable U, Resilient Cyber, Return on Security, Risky Business (Bulletin, Srsly, Soap Box), Unsupervised Learning, CloudSecList, Venture in Security, CISO Series (Defense in Depth, Cyber Security Headlines), Darknet Diaries, Security Weekly, and others.
- 103 raw sponsorship observations were recorded, each with the brand, the issue or episode, the date, the format (primary / secondary / dedicated / mention), and the URL.
- Brands were ranked by editorial alignment with a detection engineering audience, recency and recurrence of spend (recurrence = active budget), and format purchased.
- Contacts were identified from public sources only: official team pages, press releases, conference bios, public LinkedIn pages. Nothing was scraped from behind a login, and **no email address in this report was guessed**: published addresses are marked as such; everything else is marked "verify before sending" and should be run through an email verification tool.

Your pricing: what the market will bear

No comparable newsletter publishes a full rate card except CloudSecList, which is why it anchors this recommendation:

BENCHMARK	AUDIENCE	PRICE	SOURCE
CloudSecList	12,000+ cloud security subscribers	\$1,950 per placement, 2 slots/issue, volume discount from 4 slots, sold out 2025	https://cloudseclist.com/sponsor
Vulnerable U	32,000+ subscribers, ~44% open rate	Rates on request; two tiers (primary/secondary) plus social and video upsells	https://www.vulnu.com/c/sponsors
Resilient Cyber	31,287 subscribers, 46% open rate	Rates on request; featured slot plus sponsored podcast interview	https://www.resilientcyber.io/sponsorships
Venture in Security	20,000+ subscribers, 30-40% open rate	Rates on request; single text placement per article	https://ventureinsecurity.net/p/sponsor

CloudSecList sells at roughly \$0.16 per subscriber per placement to an audience very close to yours in specialization. Applied to your 15,000 highly targeted subscribers:

- **Primary placement (top of issue, 400-600 characters, one CTA link): \$2,000-2,500.** Justified above the per-subscriber benchmark by the specialization of your audience and the fact that your inventory is untouched: no sponsor fatigue.
- **Secondary placement (lower in issue, shorter): \$900-1,200.**
- **Classified / one-line mention: \$350-450.**
- **Bundle: 4 primary slots for the price of 3.2** (20% volume discount), matching the segment norm of multi-issue purchases.

Standard segment packaging, observed identically across the four titles above: two slots per issue (primary + secondary), with upsells (social promotion, podcast interview, full-week takeover as sold by Risky Business). Start with primary + classified only; add tiers as demand proves out.

One data point to add yourself before pitching: your open rate. Your peers publish theirs (44% Vulnerable U, 46% Resilient Cyber, ~50% CloudSecList) and sponsors will ask. Substack shows it in your stats dashboard; if it is above 40%, put it in every pitch.

Your mini media kit: the five numbers that sell

1. **15,000 subscribers**, and say it precisely: sponsors discount round numbers they cannot verify. If you can screenshot your Substack dashboard in the pitch thread, do it.
2. **Weekly since 2022, 163 consecutive issues**: reliability is what media buyers price.
3. **Who reads you**: detection engineers, SOC leads, threat intel analysts, the exact buyer persona for detection, SIEM, SOAR, and endpoint tooling. Name the job titles, not "security professionals".
4. **Zero sponsors to date**: virgin inventory, no banner blindness, first movers get category exclusivity if you choose to offer it.
5. **Your open rate and CTR** (from your dashboard): the segment norm among your peers is 40-50% open; if you beat it, lead with it.

Follow-up templates

Follow-up 1 (day +4):

SUBJECT Re: [original subject]

Hi [First name], following up briefly. The [primary] slot for [month] is still open; after that the next availability is [date]. If newsletters are not in your Q3 mix, a one-line reply saying so is genuinely useful and I will not follow up again.

Follow-up 2 (day +10):

SUBJECT closing the loop, [Brand] x Detection Engineering Weekly

Hi [First name], last note from me. Since my first email, [insert one fresh, verifiable data point: new issue published, subscriber growth, or a relevant industry event]. If the timing is wrong this quarter, I am happy to reconnect in [month]. Otherwise I will leave it here.

Two follow-ups, then stop. The audience you are selling to (marketing leaders in security) is oversolicited; restraint is a signal.

Your first 14 days: how to run this list

Thirty pitches is ammunition, not a plan. Here is the plan.

DAY 0, BEFORE ANYTHING

run every address marked "verify before sending" through an email verification tool (statuses are in the contacts CSV; nothing in this report was guessed, but only "published" addresses have a public source). Pull your open rate from your dashboard and drop your real numbers into the pitch placeholders. Fifteen minutes that protect your sender reputation and your credibility.

DAYS 1-2, THE THREE RECOMMENDED CALLS

send Tines, Sublime Security, and Nebulock first, exactly as pitched. One email at a time, from your normal address, no sequencing tool: at this volume, tools add risk and remove warmth.

DAYS 3-5, THE REST OF TIER 1

three to four sends a day, not more. Small batches keep quality up and let you fold what you learn into the next sends. Before each send, re-read the entry's caveats: contact data ages fast in this segment, and two tier-1 brands carry acquisition caveats.

FOLLOW-UP WINDOWS

day +4 and day +10 per thread, using the two templates above, then stop. Restraint is part of the pitch.

DAYS 6-10, TIER 2

same rhythm. If a slot gets booked meanwhile, update your later pitches with the real availability; scarcity is only an argument when it is true.

DAYS 11-14, TIER 3 AND REPLIES

send tier 3 in the same batches. Any reply asking for details gets your one-pager (the five media kit numbers, formats, prices, open dates) the same day. A "not this quarter" gets a circle-back date in your tracker, not a rebuttal.

TRACK IT IN THE CSV

add columns for status, sent date, follow-up dates, and reply. The CSV is your pipeline; twenty minutes of bookkeeping a week keeps the whole cycle honest.

WHAT A GOOD FIRST CYCLE LOOKS LIKE

the realistic goal of cycle one is conversations, not signatures: replies, a call or two, a slot pencilled in. Most of the thirty will not answer, which is why there are thirty. Your list, your pacing; but do not let a quiet week push you into blasting the remainder in one afternoon.

Limits and caveats, stated plainly

- Every non-published email must be verified with a verification tool before sending. Verified-published addresses are flagged in each entry.
- Two tier-1 brands carry acquisition caveats: Panther (acquisition by Databricks announced June 16, 2026; marketing budgets may be frozen) and Wiz (now part of Google Cloud; buying is likely delegated deep into a demand gen team we could not identify publicly). Both remain worth a pitch, with expectations set accordingly.
- Contact data decays fast in this segment: three recent departures were detected and excluded during research (Palo Alto Networks, Vanta, Material Security). Re-verify any contact older than a quarter before sending.
- Observations cover a 6-week core window. A brand absent from this report is not proven inactive; a brand present is proven active.

The 30 sponsors: evidence, contacts, ready-to-send pitches

Priority tier 1 (brands 1-10)

WHY THEY'LL SPONSOR YOU

Tines sells no-code security automation to SOC and security operations teams, exactly your readership, and is the single most active newsletter buyer we observed: the same webinar campaign ran simultaneously as primary placements in Unsupervised Learning #533 on 2026-06-20 and #535 on 2026-07-06 (<https://newsletter.danielmiessler.com/p/unsupervised-learning-no-533>, <https://newsletter.danielmiessler.com/p/unsupervised-learning-no-535>), CloudSecList #343 on 2026-06-21 and #346 on 2026-07-12 (<https://cloudseclist.com/issues/issue-343/>, <https://cloudseclist.com/issues/issue-346/>), tl;dr sec #335 on 2026-07-02 (<https://tldrsec.com/p/tldrsec-335>), plus Vulnerable U #174 on 2026-06-26 (<https://www.vulnu.com/p/vulnerable-u-174>) and two Venture in Security issues (2026-06-23 and 2026-07-14).

WHO TO CONTACT

Hannah McCabe, Demand Generation (exact title unconfirmed; corroborated by RocketReach, ZoomInfo, and her public LinkedIn hiring posts for the demand gen team). Notably, no CMO or VP Marketing is listed on tines.com/about or TheOrg. Email status: not published, verify before sending. Fallback: Jason Fidler, media contact named in the 2025-07-28 PR Newswire release.

READY-TO-SEND PITCH

SUBJECT You bought 4 newsletters in July. Missing one.

Hannah,

Tines ran the same campaign across Unsupervised Learning, CloudSecList, and tl;dr sec in the last five weeks, so security newsletters clearly perform for you.

Detection Engineering Weekly is the one you haven't bought: ~15,000 subscribers, almost all detection engineers, SOC leads, and threat intel practitioners. Weekly, 163 issues, zero sponsors to date, clean inventory, no ad fatigue.

Primary placement is \$2,000-2,500. For reference, CloudSecList charges \$1,950 at 12k subscribers and is sold out into 2026.

Worth a 15-minute call, or shall I just send open dates?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Sublime sells an email detection platform whose users write detection rules, your core reader. In early July they bought a full week of Risky Business inventory: primary plus secondary slots in Risky Bulletin on 2026-07-06, 07-08 and 07-10 (<https://news.risky.biz/risky-bulletin-android-drops-pin-guessing-limit-from-1-800-attempts-to-just-20/>, <https://news.risky.biz/risky-bulletin-india-bans-app-used-to-hack-e-rickshaws-in-viral-videos/>), a Srsly Risky Biz slot on 2026-07-09 (<https://news.risky.biz/ssupreme-court-undermines-section-702/>), and a sponsored podcast interview the same week (<https://risky.biz/RBNEWSSI135/>). Also a secondary slot in tl;dr sec #332 on 2026-06-11 and a listed past sponsor of Vulnerable U.

WHO TO CONTACT

Kristi Evans, VP of Marketing (public LinkedIn headline, arrival post April 2025, active June 2026; ex-Wiz and Okta). Email status: not published, verify before sending. Fallback: Kevin Gough, Head of Product Marketing.

READY-TO-SEND PITCH

SUBJECT **After the Risky Biz takeover, 15k detection engineers**

Kristi,

Sublime bought the full Risky Business week in early July (Bulletin slots, Srsly, plus the sponsored interview). That audience overlaps heavily with mine, but mine is narrower and cheaper.

Detection Engineering Weekly: ~15,000 subscribers, weekly, 163 issues. Detection engineers and SOC teams, the people who evaluate email detection platforms hands-on. Zero sponsors so far.

Primary placement runs \$2,000-2,500 (CloudSecList: \$1,950 at 12k subscribers, sold out).

Want open dates for September?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Maze (mazehq.com, London, \$31M raised) sells AI agents for cloud vulnerability triage and is mid-launch-campaign across security media: primary in Security, Funded #251 on 2026-07-06 (<https://www.returnonsecurity.com/p/security-funded-251>), primary in Unsupervised Learning #536 on 2026-07-13 (<https://newsletter.danielmiessler.com/p/unsupervised-learning-no-536>), secondary in UL #534 on 2026-06-25 and tl;dr sec #335 on 2026-07-02 (<https://tldrsec.com/p/tldr-sec-335>), Darknet Diaries spots across EP 173-177 (<https://darknetdiaries.com/episode/177/>), and launch partner of Vulnerable U's podcast (#176, #177).

WHO TO CONTACT

Harry Wetherald, Co-founder & CEO (BusinessWire 2025-06-10, Tracxn 2026). No marketing hire yet, a Senior Manager, Content & Product Marketing role was open at research time, so the budget currently sits with the founders. Email status: not published, verify before sending. Fallback: Adrian Jozwik, Co-founder & CPO, or the demo form at mazehq.com.

READY-TO-SEND PITCH

SUBJECT **Your launch campaign is missing the detection crowd**

Harry,

Maze is everywhere right now, Security Funded, Unsupervised Learning, tl;dr sec, Darknet Diaries. Strong launch motion.

One gap: Detection Engineering Weekly, ~15,000 detection engineers and SOC practitioners, the users who actually operationalize vulnerability findings. Weekly, 163 issues, zero sponsors ever, so you would be the first brand readers see there.

Primary placement is \$2,000-2,500; CloudSecList charges \$1,950 at 12k subscribers and is sold out.

Reply and I'll send available dates, September is open.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Corelight sells network detection and response built on Zeek, bought by the exact teams that read a detection engineering newsletter. In late June they ran a Risky Business weekly pack: primary slots in Risky Bulletin on 2026-06-29 and 2026-07-01, the latter with a sponsored interview and Open NDR demo (<https://news.risky.biz/risky-bulletin-microsoft-disrupts-stegoad-operation/>, <https://news.risky.biz/risky-bulletin-researcher-drops-giant-cache-of-zero-day-exploits/>), plus Srsly Risky Biz on 2026-07-02 (<https://news.risky.biz/srsly-risky-biz-america-wont-beat-the-distillation-ecosystem/>). Listed as a recurring partner on [risky.biz/sponsorship](https://news.risky.biz/sponsorship).

WHO TO CONTACT

Julie Parrish, Chief Marketing Officer (official leadership page, in post since July 2021). Execution likely routes through demand gen or field marketing: fallback Jim Campbell, Senior Director NA Field Marketing (TheOrg), or media@corelight.com (published on the Newsroom page). Email status for Parrish: not published, verify before sending.

READY-TO-SEND PITCH

SUBJECT NDR in front of 15k detection engineers

Julie,

Corelight ran the Risky Business week of June 29, Bulletin slots, Srsly, the Open NDR demo interview. Clearly newsletters and practitioner audio are working for you.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC leads and threat intel analysts every week, the practitioners who write the rules your sensors feed. 163 issues, zero sponsors to date.

Primary placement: \$2,000-2,500 (benchmark: CloudSecList, \$1,950 at 12k subscribers, sold out into 2026).

Happy to send a one-pager, or book 15 minutes with whoever owns media.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Nebulock (Boston, \$25M Series A led by FirstMark, announced 2026-06-25) sells hunt-first, always-on security operations, threat hunting is the literal center of your editorial line. They paid for a wholly sponsored Risky Business Soap Box episode on using threat hunting to drive detection, published 2026-07-08 (<https://risky.biz/video/soap-box-using-threat-hunting-to-drive-detection/>), and appeared in the Tines webinar campaign promoted across three newsletters in June.

WHO TO CONTACT

Damien Lewke, Founder & CEO, the only named person on nebulock.io/about, with a product marketing background (CrowdStrike, Arctic Wolf) and his own Substack, so he understands exactly what a newsletter placement buys. Email status: not published, verify before sending. Fallback: the demo form at nebulock.io/demo.

READY-TO-SEND PITCH

SUBJECT The Soap Box audience, but 100% detection people

Damien,

The Soap Box episode on threat hunting driving detection (July 8) landed in front of a broad security audience. My readers are the narrow version of that: ~15,000 detection engineers, threat hunters and SOC leads, every week, 163 issues in.

Fresh off your Series A, if pipeline from practitioners matters this quarter: the newsletter has carried zero sponsors ever. First brand in gets clean attention.

Primary placement is \$2,000-2,500, CloudSecList charges \$1,950 at 12k subscribers and is sold out.

You write on Substack; you know what this inventory is worth. Call?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Wiz (now part of Google Cloud; acquisition closed 2026-03-11) sells cloud security to security and platform teams and keeps buying practitioner newsletters post-acquisition: primary slots in tl;dr sec #332 on 2026-06-11 (State of SDLC 2026 report) and #337 on 2026-07-16 (AI Security Starter Pack) (<https://tldrsec.com/p/tldr-sec-332>, <https://tldrsec.com/p/tldr-sec-337>), plus listed past-sponsor status on both the Vulnerable U and Resilient Cyber sponsor pages. Caveat: at this scale, buying is delegated to a demand gen team we could not identify publicly; expect routing.

WHO TO CONTACT

Raaz Herzberg, CMO & VP Product Strategy (multiple 2025-2026 sources), as the named entry point; the operational buyer is unidentified. Published channel: press@wiz.io (Newsroom page). Email status for Herzberg: not published, verify before sending.

READY-TO-SEND PITCH

SUBJECT tl;dr sec works for Wiz, here's the adjacent list

Hi,

Wiz ran primary slots in tl;dr sec twice in the last five weeks (June 11, July 16), so practitioner newsletters are in your mix.

Detection Engineering Weekly is the adjacent audience: ~15,000 detection engineers and SOC practitioners, weekly, 163 issues, zero sponsors to date. These are the people operationalizing cloud detections day to day.

Primary placement is \$2,000-2,500; CloudSecList charges \$1,950 at 12k subscribers and is sold out into 2026.

If someone on the demand gen side owns newsletter buys, I'd appreciate an intro, one email, no follow-up chain.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

runZero (founded by HD Moore, ~75 people) sells asset discovery and exposure management to security operations teams. Active on three comparable properties in June alone: primary slot in tl;dr sec #333 on 2026-06-18 (<https://tldrsec.com/p/tldr-sec-333>), native ad in Vulnerable U #174 on 2026-06-26 (<https://www.vulnu.com/p/vulnerable-u-174>), and a sponsored Risky Business episode with interview, #841 on 2026-06-10 (<https://risky.biz/RB841/>). Also listed as a recurring partner on risky.biz/sponsorship.

WHO TO CONTACT

Julie Albright, Chief Marketing Officer (official runzero.com author page; TheOrg lists her as COO, likely a dual role). Email status: not published, verify before sending. Fallback: the contact form at runzero.com/contact-us.

READY-TO-SEND PITCH

SUBJECT Three security newsletters in June. One left.

Julie,

runZero bought tl;dr sec, Vulnerable U, and a Risky Business episode within three weeks in June, a clear multi-title play.

The title missing from that list: Detection Engineering Weekly. ~15,000 subscribers, weekly, 163 issues, detection engineers and SOC leads, the practitioners who feel unknown-asset pain first. The newsletter has never carried a sponsor, so yours would be the first logo readers see.

Primary placement: \$2,000-2,500. Benchmark: CloudSecList, \$1,950 at 12k subscribers, sold out.

Want September dates?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Dropzone (dropzone.ai, \$20M+ raised) sells an AI SOC analyst that triages alerts autonomously, sold directly to the SOC teams who read you. They paid for a wholly sponsored Risky Business Soap Box episode on AI in detection and response, published 2026-06-05 (<https://risky.biz/SOAPBOX108/>), a long-form format that costs well above a newsletter slot.

WHO TO CONTACT

Anne Gotay, VP of Growth since June 2024 (TheOrg and public LinkedIn), the natural owner of a newsletter buy. Email status: not published, verify before sending. Fallback: Edward Wu, Founder & CEO; published media channel: todom@golaunchtech.com (LaunchTech Communications, from the 2026-02-04 press release).

READY-TO-SEND PITCH

SUBJECT The SOC audience your Soap Box episode aimed at

Anne,

Dropzone invested in a full sponsored Soap Box episode in June, long-form, broad security audience.

Detection Engineering Weekly is the concentrated version: ~15,000 subscribers who are almost entirely detection engineers, SOC analysts and their leads. The exact evaluators of an AI SOC analyst. Weekly, 163 issues, and zero sponsors to date.

Primary placement is \$2,000-2,500, for scale, CloudSecList charges \$1,950 at 12k cyber subscribers and sold out 2025.

15 minutes this week, or I can just send the one-pager and open dates.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Panther sells a detection-as-code SIEM, arguably the single most aligned product in this report, and already invests in this exact audience: a paid placement in Venture in Security on 2026-06-16 (<https://ventureinsecurity.net/p/11-generalist-mental-models-applied>) and its own media property, Detection at Scale. Caveat, stated plainly: Databricks announced the acquisition of Panther on 2026-06-16 (<https://www.databricks.com/company/newsroom/press-releases/databricks-agrees-acquire-panther-further-establishing-security>); marketing budgets may be frozen or in transition. Worth one email with expectations set accordingly.

WHO TO CONTACT

Shannon King, CMO (official About Us page, checked 2026-07-21). Email status: not published, verify before sending. Fallback: Jack Naglieri, Founder & CEO.

READY-TO-SEND PITCH

SUBJECT Detection-as-code, in front of 15k detection engineers

Shannon,

Panther sponsored Venture in Security in June, and you run Detection at Scale, you clearly believe in this audience.

Detection Engineering Weekly is its independent watering hole: ~15,000 detection engineers and SOC practitioners, weekly, 163 issues, zero sponsors ever. If visibility through the Databricks transition matters, this is the cheapest way to stay in front of your exact users.

Primary placement: \$2,000-2,500 (CloudSecList benchmark: \$1,950 at 12k subscribers, sold out).

If budgets are paused, tell me when to circle back, one line is enough.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

ThreatLocker (Orlando, several hundred employees) sells endpoint allowlisting and zero trust controls, and is the largest buyer of cyber audio inventory we observed: host-read spots on every Darknet Diaries episode from EP 173 through 177, April to July 2026 (<https://darknetdiaries.com/episode/177/>), four Defense in Depth episodes April-July (<https://defenseindepth.libsyn.com/even-with-all-these-security-vendors-we-still-have-glaring-gaps>), a full week of Cyber Security Headlines July 13-17 (<https://cisoserries.libsyn.com/russias-router-access-routes-memghost-haunts-ai-memory-dhs-alert-got-waved-off-twice>), and listed past-sponsor status on the Vulnerable U sponsors page.

WHO TO CONTACT

Aliona Groh, Sr. Vice President, Brand Marketing (TheOrg; corroborated by a public MACH37 post, March 2025). No CMO is listed publicly. Email status: not published, verify before sending. Fallback: press@threatlocker.com (Stefany Strong, Media Relations, published in 2026 press releases).

READY-TO-SEND PITCH

SUBJECT You own cyber podcasts. This is the newsletter gap.

Aliona,

ThreatLocker is on every Darknet Diaries episode this quarter, plus Defense in Depth and a full week of Cyber Security Headlines. Your audio coverage is total; your newsletter coverage isn't.

Detection Engineering Weekly: ~15,000 detection engineers and SOC leads, the hands-on evaluators of endpoint controls, weekly, 163 issues, zero sponsors to date.

Primary placement is \$2,000-2,500. CloudSecList charges \$1,950 at 12k subscribers and sold out 2025.

Reply with a name if someone on demand gen owns this, or I'll send open dates.

[Your name], Detection Engineering Weekly

Priority tier 2 (brands 11-20)

○ 11 authentik

WHY THEY'LL SPONSOR YOU

authentik (Authentik Security) sells an open-source identity provider (SSO/IAM) to platform and security engineering teams, a ~10-16 person startup where the CEO runs go-to-market. They are actively buying comparable inventory: a sponsor block in tl;dr sec #337 on 2026-07-16 (<https://tldrsec.com/p/tldr-sec-337>) and a sponsored Risky Business episode with interview, #840 on 2026-06-03 (<https://risky.biz/RB840/>), plus a listing among active cybersecurity sponsors on SponsorGap's July 2026 trends page (<https://sponsorgap.com/sponsor-trends/cybersecurity>).

WHO TO CONTACT

Fletcher Heisler, CEO, no dedicated marketing role exists. Sources: his first-week-as-CEO post, 2024-02-22 (<https://goauthentik.io/blog/2024-02-22-my-first-week-as-ceo-at-authentik-security/>); confirmed still in post via a CEO-signed post dated 2026-05-22 (<https://goauthentik.io/blog/authors/fletcher/>). Email status: hello@goauthentik.io is published (official Enterprise docs); no direct address is published, fletcher@goauthentik.io fits the observed firstname@ pattern (RocketReach) but must be verified before sending. Fallback: hello@goauthentik.io, or Jens Langhammer (founder/CTO).

READY-TO-SEND PITCH

SUBJECT **Sponsor slot, 15k detection engineers**

Fletcher,

authentik ran a sponsor block in tl;dr sec #337 (July 16) and a sponsored Risky Business episode (#840, June 3), so you're already buying security newsletter and podcast inventory.

Detection Engineering Weekly: ~15,000 subscribers, detection engineers, SOC leads, threat intel folks. Weekly, 163 issues, zero sponsors so far, so you'd be first into clean inventory.

Primary placement is \$2,000-2,500. Benchmark: CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out.

Want the one-pager? Reply and I'll send it.

[Your name], Detection Engineering Weekly

○ 12 Thinkst Canary

WHY THEY'LL SPONSOR YOU

Thinkst sells Canary deception devices and Canarytokens to detection-minded security teams (bootstrapped, ~40 people, \$19M+ ARR); marketing is founder-led. They buy repeatedly on comparable audiences: primary slot in Risky Bulletin on 2026-07-20 (<https://news.risky.biz/risky-bulletin-hacker-wipes-romantias-entire-land-registry-database/>) plus a sponsored podcast interview the same day (<https://risky.biz/RBNEWSI136/>), a sponsored Risky Business episode #838 on 2026-05-20 (<https://risky.biz/RB838/>), long-standing partner status on the Risky Business sponsorship page (<https://risky.biz/sponsorship/>), and presence in the Darknet Diaries sponsor portfolio (<https://darknetdiaries.com/sponsors/>).

WHO TO CONTACT

Haroon Meer, Founder & CEO, marketing is run by the founder. Email status: haroon@thinkst.com was published in Black Hat 2015 notes on their own domain and matches the blog author slug, but the source is old, reconfirm before sending. Fallback: info@thinkst.com. Confidence: high on the person, medium on the direct email.

READY-TO-SEND PITCH

SUBJECT **First sponsor slot at Detection Engineering Weekly**

Haroon,

Thinkst sponsored the July 20 Risky Bulletin, newsletter slot plus the sponsored interview, and Risky Business #838 back in May. You buy practitioner media, repeatedly.

Detection Engineering Weekly: ~15,000 subscribers, mostly detection engineers and SOC teams, the people who deploy Canaries. Weekly, 163 issues, zero sponsors ever, so the inventory is clean.

Primary placement is \$2,000-2,500. CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out into 2026.

Interested? Reply and I'll send the details and dates.

[Your name], Detection Engineering Weekly

13 Material Security

WHY THEY'LL SPONSOR YOU

Material Security sells email and collaboration security for Microsoft 365 and Google Workspace to enterprise security teams (scale-up, ~85-90 people, \$166M raised). They run a steady monthly podcast rotation on a directly comparable audience: sole sponsor of three Defense in Depth (CISO Series) episodes on 2026-05-14, 2026-06-11 and 2026-07-16 (<https://defenseindepth.libsyn.com/protecting-ai-agents-in-o365-and-google-workspace>), and they are a declared past sponsor on Vulnerable U's sponsors page (<https://www.vulnu.com/c/sponsors>, undated).

WHO TO CONTACT

Nick Mueller, VP, Marketing, official About page, checked 2026-07-21 (<https://material.security/about>); 15+ years in B2B demand generation (ex-Lookout, Sift, IXOPAY). Email status: none published; nick@material.security fits the firstname@ pattern (LeadIQ, 81%) but must be verified. Fallback: the material.security/contact form. Freshness warning: ex-CMO Luke Retterath is no longer listed, likely a recent departure/transition; do not target him.

READY-TO-SEND PITCH

SUBJECT Sponsorship, Detection Engineering Weekly (15k subscribers)

Nick,

Material has been the sole sponsor of three Defense in Depth episodes since mid-May, most recently July 16 ("Protecting AI Agents in O365 and Google Workspace"), and Vulnerable U lists you as a past sponsor, practitioner security media is already in your mix.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC analysts, and threat intel practitioners weekly. 163 issues published, zero sponsors to date, untouched inventory, no ad fatigue.

Primary placement runs \$2,000-2,500 per issue. Benchmark: CloudSecList charges \$1,950 for 12k cybersecurity subscribers and sold out 2025.

Open to a 15-minute call, or should I just send the media details?

[Your name], Detection Engineering Weekly

14 Palo Alto Networks (Cortex)

WHY THEY'LL SPONSOR YOU

Palo Alto Networks sells the Cortex XSIAM/SOC platform to enterprise security operations teams (public company, FY2025 revenue \$9.22B), a major media budget. Observed buys on comparable audiences: a primary sponsor block in tl;dr sec #333 on 2026-06-18 (Cortex Cloud, SACR report promo, <https://tldrsec.com/p/tldr-sec-333>); sole sponsor of three Defense in Depth episodes on 2026-05-28, 2026-06-18 and 2026-07-09 (<https://defenseindepth.libsyn.com/humans-are-bottleneck-in-a-machine-speed-world>); declared past sponsor on Vulnerable U's sponsors page (<https://www.vulnu.com/c/sponsors>, undated).

WHO TO CONTACT

Kasey Cross, Director of Product Marketing, Cortex XSIAM, speaker bio for the "Introducing Cortex AgentiX" webinar (FutureB2B, checked 2026-07-21) and PANW blog posts dated 2025-12-18 and 2026-01-29. Email status: not published; pattern undocumented, to verify. Fallback: Peter Havens, Principal Product Marketing Manager, Cortex. Freshness warning: Joshua Costa (ex-Director PMM, Cortex & Unit 42) left for Zscaler in June 2026, do not target him; contact databases are stale on this account. Caveat: at this size, media buying often sits with demand gen or an agency, so expect a referral rather than a direct close.

READY-TO-SEND PITCH

SUBJECT **Cortex in front of 15k detection engineers**

Kasey,

Cortex took a primary slot in tl;dr sec #333 (June 18, the SACR report promo) and sponsored three Defense in Depth episodes between May and July, practitioner newsletters and podcasts are clearly part of the plan.

Detection Engineering Weekly reaches ~15,000 subscribers weekly, detection engineers and SOC teams, the audience that evaluates XSIAM. 163 issues, zero sponsors to date, so it's fresh inventory.

Primary placement is \$2,000-2,500. For context, CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out.

If media buys sit with demand gen or an agency, happy to be pointed there. Otherwise, worth a short call?

[Your name], Detection Engineering Weekly

15 Push Security

WHY THEY'LL SPONSOR YOU

Push Security sells browser-based identity attack detection and response to security teams (~102 employees, \$30M Series B in April 2025, Redpoint). Observed buy on the closest comparable in the panel: the primary sponsor slot in tl;dr sec #334 on 2026-06-25, promoting a webinar, with the outbound link tagged utm "primary-sponsor" (<https://tldrsec.com/p/tldr-sec-334>).

WHO TO CONTACT

Chris Tilton, Chief Marketing Officer, appointed 2025-04-15 (Businesswire plus Push's own announcement); ex-VP Marketing at Bugcrowd. Email status: not published; chris.tilton@pushsecurity.com fits the First.Last pattern (LeadIQ, 92%) but must be verified. Fallback: Alex Henshall, VP, Product Marketing (public LinkedIn, active blog author), or the website contact form.

READY-TO-SEND PITCH

SUBJECT Primary slot, 15k detection engineers, weekly

Chris,

Push took the primary sponsor slot in tl;dr sec #334 on June 25 for the webinar push, so newsletters read by hands-on security teams are already working for you.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC analysts, and threat intel readers every week, the crowd dealing with the identity attacks Push detects. 163 issues, zero sponsors to date: fresh inventory.

Primary placement runs \$2,000-2,500. Benchmark: CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out into 2026.

Want the audience stats and available dates?

[Your name], Detection Engineering Weekly

16 Opal Security

WHY THEY'LL SPONSOR YOU

Opal Security sells access management and identity governance (least privilege) to security and IT teams (\$59M raised, including \$23M announced 2026-06-04; new CEO Howard Ting since Dec 2025). They bought twice in the same title within a month, secondary native placements in Vulnerable U #173 on 2026-06-19 (<https://www.vulnu.com/p/vulnerable-u-173>) and #176 on 2026-07-10 (<https://www.vulnu.com/p/vulnerable-u-176>), a recurrence pattern that reads like a purchased series, and they appear among active buyers on SponsorGap's July 2026 cybersecurity trends page (<https://sponsorgap.com/sponsor-trends/cybersecurity>).

WHO TO CONTACT

Michael Kwon, VP of Marketing (ex-Clumio), 2026-06-04 press release and official team page, checked 2026-07-21 (<https://www.opal.dev/about>). Email status: not published (firstname@opal.dev pattern observed), to verify. Fallback: Christine Ooley, Head of Product & Solutions Marketing, press contact with a published email: christine@opal.dev. Freshness warning: Sara vonDohren (Director of Marketing, 2024-2025) is no longer listed, do not target her.

READY-TO-SEND PITCH

SUBJECT Sponsorship, 15k detection engineers, zero sponsors yet

Michael,

Opal ran native placements in Vulnerable U #173 (June 19) and #176 (July 10), two buys in four weeks looks like a working channel, so here's an adjacent one.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC leads, and threat intel practitioners weekly. 163 issues, zero sponsors to date, you'd be first into clean inventory.

Primary placement is \$2,000-2,500 per issue. For comparison, CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out.

Reply and I'll send formats and dates, or point me to whoever owns placements.

[Your name], Detection Engineering Weekly

17 SpecterOps

WHY THEY'LL SPONSOR YOU

SpecterOps sells BloodHound Enterprise (attack path management) and Adversary Tactics training to detection, red, and blue teams (\$75M Series B from Insight Partners, May 2025), core alignment with a detection engineering readership. They bought two consecutive weeks in Return on Security: a secondary slot for Adversary Tactics training in #252 on 2026-07-13 (<https://www.returnonsecurity.com/p/security-funded-252>) and a primary BloodHound Enterprise slot (Black Hat push) in #253 on 2026-07-20 (<https://www.returnonsecurity.com/p/security-funded-253>).

WHO TO CONTACT

Rachel Pepple, VP, Global Brand and Growth Marketing, official team page, checked 2026-07-21 (<https://specterops.io/about/>); brand and growth scope covers media buys. Email status: none published; pattern undocumented, to verify. Fallback: Bryce Hein, CMO (appointed 2025-05-20, ex-CMO Sysdig and ExtraHop); press route via agency: awilliams@voxuspr.com (Voxus PR). No demand generation role is publicly documented.

READY-TO-SEND PITCH

SUBJECT **Black Hat window, 15k detection engineers**

Rachel,

SpecterOps ran back-to-back Return on Security placements, Adversary Tactics training in #252 (July 13), then a primary BloodHound Enterprise slot in #253 (July 20), so there's a Black Hat push in flight.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC analysts, and threat hunters weekly, the exact readership for adversary tradecraft content. 163 issues, zero sponsors to date: fresh inventory.

Primary placement is \$2,000-2,500. Benchmark: CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out.

I can slot you in while the Black Hat window is open, want the details?

[Your name], Detection Engineering Weekly

18 Prowler

WHY THEY'LL SPONSOR YOU

Prowler sells an open-source cloud security platform (CSPM) to cloud security engineers (post-seed startup, \$18.5M raised). They bought the priciest dedicated format in the Risky Business catalog, a fully sponsored Soap Box episode, #107 on 2026-05-15 (<https://risky.biz/SOAPBOX107/>), and they are a declared past sponsor on Vulnerable U's sponsors page (<https://www.vulnu.com/c/sponsors>, undated).

WHO TO CONTACT

Laura Franzese, Co-founder & CMO, TechRound interview 2025-07-31; media contact on company press releases. Email status: Laura@prowler.com published in the 2024-12-17 press release (19 months old, revalidate before use). Caveat: she is absent from the /about page as checked on 2026-07-21, re-verify her status before sending. Fallback: Rajiv Taori, COO (appointed 2024-12-17, ex-SentinelOne/AWS, GTM-oriented, still listed on /about), or the contact form. Confidence: medium on Franzese, high on Taori.

READY-TO-SEND PITCH

SUBJECT **Detection Engineering Weekly, first sponsor slot**

Laura,

Prowler bought a fully sponsored Risky Business Soap Box episode on May 15 (#107), and Vulnerable U lists you among past sponsors, practitioner security media is clearly in your playbook.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC analysts, and threat intel readers weekly. 163 issues, zero sponsors to date, so the inventory is untouched.

Primary placement is \$2,000-2,500. Benchmark: CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out into 2026.

If someone else now owns media at Prowler, point me their way, otherwise, can I send the one-pager?

[Your name], Detection Engineering Weekly

19 Vanta

WHY THEY'LL SPONSOR YOU

Vanta sells compliance automation and trust management to security and GRC teams (hypergrowth scale-up, 1,000+ employees). Observed activity on comparable audiences: episode sponsor of CISO Series' The Department of Know on 2026-07-10 (<https://cisoserries.libsyn.com/the-department-of-know-france-gets-ready-for-quantum-jadepuffer-ransomware-uks-cyber-shield>), listed among active cybersecurity sponsors on SponsorGap's July 2026 trends page (<https://sponsorgap.com/sponsor-trends/cybersecurity>), and a declared past sponsor on Vulnerable U's sponsors page (<https://www.vulnu.com/c/sponsors>, undated).

WHO TO CONTACT

Sarah Scharf, VP of Revenue Marketing (demand generation scope), TheOrg plus public LinkedIn; at Vanta since Nov 2020. Note: her title varies across sources, confirm before sending. Fallback: Scott Holden, CMO (appointed 2025-07-15, explicitly oversees demand generation, growth, and field marketing per Business Wire); published generic channel: press@vanta.com. Email status: no individual email published, to verify. Freshness warning: Delaney Hertlein (ex-Global Demand Generation Manager, still visible on the site) has left for AssemblyAI, do not target her.

READY-TO-SEND PITCH

SUBJECT Fresh security newsletter inventory, 15k subscribers

Sarah,

Vanta sponsored CISO Series' The Department of Know on July 10 and appears in SponsorGap's July list of active cybersecurity sponsors, so this should slot into an existing motion.

Detection Engineering Weekly reaches ~15,000 detection engineers, SOC analysts, and security leads weekly. 163 issues, zero sponsors to date, fresh inventory, no ad fatigue.

Primary placement is \$2,000-2,500 per issue; CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out.

If media buys live elsewhere on the team, happy to be redirected. Otherwise, can I send details and dates?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Scanner.dev sells fast log search and detection over security data lakes (S3) to SOC and detection teams, a ~14-person, Sequoia-backed startup where the CEO fronts marketing himself. They are already testing security media: a "sponsored conversation" in Unsupervised Learning #533 on 2026-06-20 (<https://newsletter.danielmiessler.com/p/unsupervised-learning-no-533>) and a sponsored CISO Series appearance relayed on their own blog (<https://scanner.dev/blog/ciso-series---security-you-should-know-reducing-siem-risk-with-scanner>).

WHO TO CONTACT

Cliff Crosland, Co-Founder & CEO, no public marketing role exists; he handles the company's media presence. Email status: none published, pattern undocumented, to verify; the only public channel is a "Book a Demo" form. Fallback: Steven Wu, Co-Founder & CTO.

READY-TO-SEND PITCH

SUBJECT **15k detection engineers, zero sponsors so far**

Cliff,

Scanner ran a sponsored conversation in Unsupervised Learning #533 (June 20) and a sponsored CISO Series appearance, so you're already testing security media channels.

Detection Engineering Weekly: ~15,000 subscribers, detection engineers and SOC teams, the exact audience for log search and detection tooling. Weekly, 163 issues, zero sponsors ever.

Primary placement is \$2,000-2,500. CloudSecList charges \$1,950 for 12k cybersecurity subscribers and is sold out into 2026.

Interested? Reply and I'll send details and open dates.

[Your name], Detection Engineering Weekly

Priority tier 3 (brands 21-30)

Single-signal but qualified buyers. Sponsorship observations come from the 2026-07-21 extraction (effective window: April-July 2026, core June-July); contacts from the 2026-07-21 contact research. All unpublished email addresses must be run through a verification tool before sending.

○ 21 Varonis

WHY THEY'LL SPONSOR YOU

Varonis (NASDAQ: VRNS) sells a data security platform, data access governance and threat detection on data stores, to enterprise security teams. They ran the primary slot in Vulnerable U #176 on 2026-07-10, promoting their "Breach at the Beach" CTF (<https://www.vulnu.com/p/vulnerable-u-176>), and they appear on the Darknet Diaries sponsors page (<https://darknetdiaries.com/sponsors/>, checked 2026-07-21), confirming an established practitioner-media budget beyond a one-off buy.

WHO TO CONTACT

Rob Sobers, Chief Marketing Officer (TheOrg: <https://theorg.com/org/varonis/org-chart/rob-sobers>; also <https://thecyberwire.com/podcasts/breaking-through-in-cybersecurity-marketing/186/notes>). Email not published, to verify. At this company size the buy is likely delegated to a demand gen director under Sobers, not publicly identifiable. Fallback: pr@varonis.com (Rachel Hunt, official media contact on 2025-2026 GlobeNewswire releases).

READY-TO-SEND PITCH

SUBJECT **Your Vulnerable U slot → 15k detection engineers**

Hi Rob,

Varonis took the primary slot in Vulnerable U #176 on July 10 to promote the Breach at the Beach CTF, and you're listed on Darknet Diaries' sponsor page, practitioner audiences are already in your media mix. Detection Engineering Weekly reaches roughly 15,000 detection engineers and SOC practitioners weekly; after 163 issues we've run zero sponsors, so you'd be first into untouched inventory. Benchmark: CloudSecList charges \$1,950 per placement on 12k cyber subscribers and sold out 2025. Primary placement here is \$2,000-2,500. Happy to send a one-pager, or point me to whoever owns your newsletter buys.

[Your name], Detection Engineering Weekly

○ 22 Teleport

WHY THEY'LL SPONSOR YOU

Teleport sells an infrastructure access platform (SSH, Kubernetes, database access) to platform and security engineering teams; \$110M raised at a \$1.1B valuation. Observed: sponsored quicklink in tl;dr sec #337 on 2026-07-16 (<https://tldrsec.com/p/tldr-sec-337>), listed on Vulnerable U's sponsor page (<https://vulnu.com/c/sponsors>), and flagged among active cybersecurity buyers on SponsorGap's trends page (<https://sponsorgap.com/sponsor-trends/cybersecurity>, checked 2026-07-21), a multi-title newsletter buyer right now.

WHO TO CONTACT

Kateryna Sindelar (Ivashchenko), Demand Generation, "Sr. Manager" per TheOrg (<https://theorg.com/org/go-teleport/org-chart/kateryna-ivashchenko>), "Director" per RocketReach; title divergence to confirm (LinkedIn: <https://www.linkedin.com/in/kivashchenko/>). Email not published, to verify. Fallback: Diana Jovin, CMO, appointed 2024-09-18 (<https://goteleport.com/about/newsroom/press-releases/teleport-appoints-two-new-gtm-leaders/>).

READY-TO-SEND PITCH

SUBJECT Teleport in tl;dr sec #337, comparable audience, fresh inventory

Hi Kateryna,

Teleport ran a sponsored quicklink in tl;dr sec #337 (July 16), sits on Vulnerable U's sponsor page, and shows on SponsorGap's July active-buyer list, newsletters are clearly working for you. Detection Engineering Weekly reaches about 15,000 detection engineers and SOC practitioners every week, and after 163 issues has carried zero sponsors: clean, first-mover inventory. For reference, CloudSecList charges \$1,950 per placement at 12k cyber subscribers and is sold out. Primary placement with us runs \$2,000-2,500; a lower-cost secondary slot exists if you'd rather test first. Want the media one-pager?

[Your name], Detection Engineering Weekly

○ 23 Nudge Security

WHY THEY'LL SPONSOR YOU

Nudge Security sells SaaS security and discovery, shadow IT, OAuth risk, to lean security teams. Observed: sponsored quicklink in tl;dr sec #333 on 2026-06-18 (<https://tldrsec.com/p/tldr-sec-333>), plus a confirmed past-sponsor listing on Vulnerable U's sponsor page (<https://vulnu.com/c/sponsors>). Multi-title signal on exactly the practitioner-newsletter format DEW sells.

WHO TO CONTACT

Emily Thurman, VP of Growth Marketing, first-rank source: her author page on the company site (<https://www.nudgesecurity.com/authors/emily-thurman>, checked 2026-07-21); ex-AVP Demand Generation at AT&T Cybersecurity, ex-VP Marketing at Panther. Ideal buyer profile. Email not published, to verify. Fallback: contact form (<https://www.nudgesecurity.com/contact/contact-us>); PR via Hi-Touch PR.

READY-TO-SEND PITCH

SUBJECT **Nudge's tl;dr sec quicklink → 15k SOC readers**

Hi Emily,

Nudge bought a sponsored quicklink in tl;dr sec #333 (June 18) and is listed on Vulnerable U's sponsor page, so practitioner newsletters are already part of your demand gen. Detection Engineering Weekly goes weekly to roughly 15,000 detection engineers and SOC practitioners, the people chasing OAuth grants and shadow SaaS in their telemetry, and has run zero sponsors in 163 issues. CloudSecList, the closest public benchmark, charges \$1,950 at 12k cyber subscribers and sold out 2025. Primary here is \$2,000-2,500; there's also a smaller secondary slot for a cheaper first test. Interested in the details?

[Your name], Detection Engineering Weekly

○ 24 Intruder

WHY THEY'LL SPONSOR YOU

Intruder sells attack surface and vulnerability management to lean security teams (London, ~100 people).

Observed: primary "Brought to you by" sponsor of Vulnerable U #177 on 2026-07-17 (<https://www.vulnu.com/p/vulnerable-u-177>), a top-of-newsletter takeover on an audience directly comparable to DEW's.

WHO TO CONTACT

David Koke, VP of Marketing, confirmed on the official About page (<https://www.intruder.io/about-us>, checked 2026-07-21; LinkedIn: <https://uk.linkedin.com/in/david-koke>). Direct email not published, to verify. Fallback: contact@intruder.io (published in site footer); second name: Chris Wallis, founder CEO.

READY-TO-SEND PITCH

SUBJECT **Your Vulnerable U #177 takeover → detection engineering audience**

Hi David,

Intruder was the "brought to you by" primary sponsor of Vulnerable U #177 on July 17, so security newsletters are demonstrably in your playbook. Detection Engineering Weekly reaches around 15,000 detection engineers and SOC practitioners each week, teams that sit next to the vuln management function, and has published 163 issues with zero sponsors to date, so the inventory is brand new. Closest public benchmark: CloudSecList, \$1,950 per placement at 12k cyber subscribers, sold out. I'm opening primary placements at \$2,000-2,500, with a lower-cost secondary option. Want the one-pager?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

BlinkOps sells agentic security automation and workflow tooling to SOC and security operations teams (\$50M Series B, July 2025). Observed: primary sponsor slot in tl;dr sec #336 on 2026-07-09, attributed via the CTA domain go.blinkops.marketing (<https://tldrsec.com/p/tldr-sec-336>); the rendered issue also mentioned HUMAN Security in the same campaign, worth a visual re-check before quoting it back to them.

WHO TO CONTACT

Aileen Balzano, Director, Marketing / Director, Demand Generation (official media contact on the 2025-10-30 Fortune Cyber 60 release: <https://www.prnewswire.com/news-releases/blinkops-named-to-fortunes-prestigious-2026-cyber-60-list-for-second-consecutive-year-302599490.html>; TheOrg lists "Director, Demand Generation"). Email published: aileen@blinkops.com (Yahoo Finance version of the release: <https://finance.yahoo.com/news/blinkops-named-fortunes-prestigious-2026-130000754.html>). Fallback: Ashish Kuthiala, CMO.

READY-TO-SEND PITCH

SUBJECT **BlinkOps' tl;dr sec primary → 15k SOC practitioners**

Hi Aileen,

BlinkOps took the primary slot in tl;dr sec #336 on July 9, so practitioner newsletters are already in your demand gen mix. Detection Engineering Weekly reaches roughly 15,000 detection engineers and SOC practitioners weekly, the people who operate SOC automation day to day, and after 163 issues has run zero sponsors, meaning first-mover inventory. Public benchmark: CloudSecList charges \$1,950 per placement on 12k cyber subscribers and sold out 2025. Primary placement is \$2,000-2,500; a secondary slot costs less if you'd rather pilot. Want me to send the one-page kit?

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Drata sells compliance automation (SOC 2, ISO 27001, continuous controls monitoring) to security and GRC teams; unicorn-stage scale-up. Observed: secondary placement in Security, Funded #250 on 2026-06-29 promoting a CISO compliance guide (<https://www.returnonsecurity.com/p/security-funded-250>), plus a host-read spot on Darknet Diaries EP 174 on 2026-05-05 (<https://darknetdiaries.com/episode/174/>), active across both newsletter and podcast formats.

WHO TO CONTACT

Arun Singh, Chief Marketing Officer, promoted April 2025 (TheOrg: <https://theorg.com/org/drata/org-chart/arun-singh>; medium confidence, re-verify before contact, previous CMO Sydney Sloan left for G2 in July 2024, do not contact her). Email not published, to verify; buy likely delegated to demand gen. Fallback: press@drata.com (published on PR Newswire releases).

READY-TO-SEND PITCH

SUBJECT **Drata's Security, Funded slot → new security newsletter inventory**

Hi Arun,

Drata ran a secondary placement in Security, Funded #250 on June 29 (the CISO compliance guide) and a host-read spot on Darknet Diaries EP 174 in May, so security audiences are an active channel for you. Detection Engineering Weekly reaches about 15,000 detection engineers and SOC practitioners weekly and has carried zero sponsors across 163 issues, untouched inventory. Benchmark: CloudSecList charges \$1,950 per placement at 12k cyber subscribers and sold out 2025. Primary placement is \$2,000-2,500. If a demand gen lead owns this, happy to be redirected. Should I send the one-pager?

[Your name], Detection Engineering Weekly

○ 27 Persona

WHY THEY'LL SPONSOR YOU

Persona sells identity verification (KYC, fraud and account-abuse prevention) to product, trust-and-safety and security teams; ~\$2B valuation. Observed: primary sponsor of Vulnerable U #173 on 2026-06-19 (<https://www.vulnerable-u.com/p/vulnerable-u-173>), a top-slot buy on a security-practitioner newsletter with an audience profile close to DEW's.

WHO TO CONTACT

Evelyn Ju, VP of Marketing (also Head of Product Marketing; at Persona since October 2020). Sources: TheOrg (<https://theorg.com/org/withpersona/org-chart/evelyn-ju>), Sharebird (<https://sharebird.com/profile/evelyn-ju>). Email not published; documented pattern firstname@withpersona.com (<https://www.clay.com/dossier/persona-email-format>), so likely evelyn@withpersona.com, verify before use. Fallback: Ed O'Brien, Head of Brand; generic channel pr@withpersona.com.

READY-TO-SEND PITCH

SUBJECT **Persona's Vulnerable U primary → adjacent audience, untouched inventory**

Hi Evelyn,

Persona ran the primary slot in Vulnerable U #173 on June 19, so security-practitioner newsletters are already on your list. Detection Engineering Weekly reaches roughly 15,000 detection engineers and SOC practitioners weekly, teams that investigate account-takeover and fraud signals, and after 163 issues has zero sponsors: first-mover inventory. For pricing context, CloudSecList charges \$1,950 per placement at 12k cyber subscribers and is sold out. Primary placement here is \$2,000-2,500, with a lower-cost secondary option. Worth a look? I can send a one-pager and a sample issue.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Speakeasy sells API tooling, recently repositioned as an "AI control plane," to engineering teams (20-40 people). Observed: primary sponsor of Security, Funded #252 on 2026-07-13 (<https://www.returnonsecurity.com/p/security-funded-252>) and secondary in Unsupervised Learning #535 on 2026-07-06 (<https://newsletter.danielmiessler.com/p/unsupervised-learning-no-535>), an active two-title security-adjacent campaign. Editorial fit with a detection audience is the weakest of this tier (flagged borderline at consolidation), so lead with the cheaper secondary slot.

WHO TO CONTACT

Hector Hernandez, Founding Head of GTM, official team page (<https://www.speakeasy.com/company>, checked 2026-07-21); no dedicated marketing title currently listed (former VP Marketing Joe Scheuermann has left, do not contact). Only published email: nolan@speakeasy.com (Nolan Sullivan, Founding DevRel, via <https://github.com/speakeasy-api>); others to verify. Fallback: Sagar Batchu, Co-founder and CEO.

READY-TO-SEND PITCH

SUBJECT **Saw Speakeasy in Security, Funded and UL, a cheaper adjacent test**

Hi Hector,

Speakeasy ran the primary slot in Security, Funded #252 (July 13) and a secondary in Unsupervised Learning #535 (July 6), so you're actively testing security-adjacent newsletters. Detection Engineering Weekly reaches about 15,000 detection engineers and SOC practitioners weekly, engineers who build and maintain API-heavy pipelines and internal tooling, and has run zero sponsors in 163 issues. Benchmark: CloudSecList charges \$1,950 at 12k cyber subscribers, sold out. For a first test I'd suggest our lower-cost secondary slot rather than the \$2,000-2,500 primary. If the audience fits your ICP, reply and I'll send numbers.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Minimal (minimal.dev, "Minimal Software Research," Canada) builds sandboxing for AI agents, currently in early access behind a waitlist. Observed: secondary sponsor slot in tl;dr sec #336 on 2026-07-09 (<https://tldrsec.com/p/tldr-sec-336>), proof that even at this stage they spend on practitioner newsletters. Do not confuse with "Minimal AI" (gominimal.ai, YC S25, e-commerce support), a different company.

WHO TO CONTACT

No named contact found, no team page, no names on the site or the GitHub org (<https://github.com/gominimal>), no identifiable LinkedIn. That is an honest gap, not an oversight. Channel: the "Join the waitlist" form on minimal.dev, or a GitHub issue as fallback. No email published. Early-stage caution: budget may be small, lead with the low-cost secondary slot.

Ready-to-send pitch (adapted for the waitlist form / GitHub channel) :

SUBJECT Sponsorship idea from Detection Engineering Weekly (saw you in tl;dr sec #336)

Hi Minimal team,

Reaching out through the waitlist form since I couldn't find a direct contact. I noticed Minimal's sponsored slot in tl;dr sec #336 on July 9, so you're already experimenting with practitioner newsletters. Detection Engineering Weekly reaches roughly 15,000 detection engineers and SOC practitioners every week and has run zero sponsors in 163 issues, fresh inventory, same reader profile. For an early-stage team I'd suggest a lower-cost secondary/classified slot rather than the \$2,000-2,500 primary (benchmark: CloudSecList charges \$1,950 at 12k cyber subscribers, sold out). If useful, reply from any team address and I'll send details.

[Your name], Detection Engineering Weekly

WHY THEY'LL SPONSOR YOU

Adaptive Security sells AI-powered phishing and deepfake simulation plus security awareness training to security teams; founded 2024, \$43M from a16z/OpenAI Fund (April 2025) and an \$81M Series B from Bain Capital Ventures (December 2025), well-funded and building GTM. Observed: secondary sponsor slot in tl;dr sec #334 on 2026-06-25 (<https://tldrsec.com/p/tldr-sec-334>).

WHO TO CONTACT

Ainsley Vondeling, Chief of Staff, GTM (single source, TheOrg: <https://theorg.com/org/adaptive-security>, low confidence, re-verify at outreach; no CMO/VP Marketing publicly identifiable, marketing hiring likely in progress). Email not published, to verify. Fallback: Brian Long, CEO and Co-Founder, ex-founder of Attentive with a strong marketing profile (<https://www.adaptivesecurity.com/author/brian-long>); generic channel info@adaptivesecurity.com (<https://www.adaptivesecurity.com/press>).

READY-TO-SEND PITCH

SUBJECT

Adaptive's tl;dr sec slot → 15k SOC readers, zero-sponsor inventory

Hi Ainsley,

Adaptive Security ran a secondary slot in tl;dr sec #334 on June 25, so practitioner newsletters are already in your GTM mix. Detection Engineering Weekly reaches roughly 15,000 detection engineers and SOC practitioners weekly, the teams detecting the phishing and deepfake activity you simulate, and after 163 issues carries zero sponsors: fresh inventory. Public benchmark: CloudSecList charges \$1,950 per placement at 12k cyber subscribers and sold out 2025. Primary placement is \$2,000-2,500; secondary costs less. If someone else owns media buys as the team scales, glad to be pointed there. Want the one-pager?
